

Prost EZE

According to statistics, prostate problems affect over 50% of males over the age of 50. Benign prostatic hyperplasia or BPH, is a condition in which the prostate gland thickens and increases in size, often restricting or blocking the flow of urine through the urethra. This prevents the bladder from fully emptying and can lead to a variety of more serious health problems.

Recent research has compelled me to review our prostate support formula and to make major revisions in that formulation. New clinical studies have shown several other nutrients to be of additional benefit assisting the body in managing inflammation.

In addition to Saw Palmetto, current research shows that when you combine this with other nutrients such as Vitamin C, Vitamin D, Diindolymethane and the key amino acids Glycine, Alanine and Glutamic Acid, they contribute to making the effectiveness of Saw Palmetto much more significant. These new ingredients now represent what we feel is the most powerful, up to date prostate support formula possible. Our dedication to providing the best that nutritional science has to offer compels us to look at all of our formulas on a regular basis and update them when warranted. This is new formula is the result of that commitment.
